DETAILED ACTION

Allowable Subject Matter

1. Claims 11-29 are allowed.

2. The following is an examiner's statement of reasons for allowance:

The best prior art of record, taken alone or in combination thereof, fails to teach:

Claim 1: a charge predictor for calculating, the amount of charge that is able to be drawn from the energy storage unit, up to the at least one cutoff threshold, wherein the calculated amount of charge is based on the product of a time value and a measured or a predetermined discharge current, and wherein the time value is based on an amount of time before the at least one cutoff threshold is met; and an estimator for ascertaining at least one state variable based on at least one operating performance quantity of the energy storage unit, wherein the charge predictor includes a mathematical energy storage model that receives the at least one state variable as input and provides an estimate of a variable value as a function of time, and wherein the time value is an estimated point in time when the variable value meets or exceeds the at least one cutoff threshold.

Claim 19: calculating, using a charge predictor, the amount of charge that is able to be drawn from the energy storage unit, wherein the calculated amount of charge is based on the product of a time value and a measured or a predetermined discharge current, and wherein the time value is based on an amount of time before the at least one cutoff

threshold is met; ascertaining, using an estimator, at least one of state variables and parameters, based on at least one operating performance quantity the energy storage unit, wherein the charge predictor includes a mathematical energy storage model that receives the at least one state variable as input and provides an estimate of a variable value for any given point in time, and wherein the time value is the given point in time when the variable value meets or exceeds the at least one cutoff threshold.

Claim 21: a charge predicting arrangement including: at least a first input to receive at least one of a state variable and a parameter from a state estimator, the state estimator configured to receive as input at least one of a recent operating voltage, temperature, and current of the energy store; at least a second input to receive at least one of a discharge current characteristic and a temperature characteristic; and a storing arrangement to store at least one energy store performance model; wherein the charge predicting arrangement is configured to determine a charge remaining in the energy store, wherein the charge remaining is determined as being drawn up to at least one predetermined cutoff criteria that indicates a cutoff that is prior to a full discharge of the energy store, wherein the at least one predetermined cutoff criteria is a threshold value for the at least one of a state variable and a parameter, and wherein the performance model is configured to estimate a time until the threshold value is met, and the charge remaining determination is based on this time estimate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
